

## 80ns, Low-Power, RRIO, High-Speed Comparators

### FEATURES

- Low Power Consumption: 160 $\mu$ A (TYP)
- Wide Supply Voltage: 2.7V to 5.5V
- Fast Response: 80ns Propagation Delay with 100mV Overdrive
- Input Common-Mode Range Extends beyond Supply Rails 300mV
- Push-Pull Output
- Offset Voltage: 0.7mV (TYP)
- 3.5mV Internal Hysteresis
- Operating Temperature Range: -40°C to +125°C
- Packages: SOT-23-5L, SOP8, MSOP8, SOP14, TSSOP14

### PRODUCT DESCRIPTION

The TS2737 family of products are low-voltage, micro-power CMOS comparators which draw less than 160 $\mu$ A per-channel of quiescent current. These devices support rail-to-rail input and output, also the input common-mode range extends beyond the supply rails.

These devices are calibrated to specified at the full temperature range of -40°C to +125°C and operated with a single or dual power supply ranged from 2.7V to 5.5V. The devices have a push-pull output stage that can drive milliamperes-level current loads close to the rails.

### APPLICATIONS

- RC Timers
- Portable and Battery-Powered Devices
- IR Receivers
- Threshold Detectors and Phase Discriminators
- Rotary Position Encoders
- Zero-Crossing Detectors

- (1) Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ESD CAUTION

ESD (electrostatic discharge) sensitive device  
Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjects to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
